EVIL TEAMS GIF

Microsoft Teams Has Had An Evil GIF All This Time Which Could Shut Down You Company

The Coronavirus is not the most deadly thing ever. On the web, for example. The web can't catch a virus (well okay, maybe it can. Just not the Coronavirus.)! The biggest problem on Microsoft Teams was and evil GIF.

This GIF was made by CyberArk, which is a white-hat hacker organization, which means that they exploit vulnerabilities in the web and internet and then tell the company which owns that web where it is and how to patch it up. They did it purely to find vulnerabilities and have found one! This GIF was especially dangerous, it could have stolen all your companies information by just viewing it!

The GIF was succesful because of the way Microsoft handled authentication tokens. These prove that you are an authentic user of Teams. These are stored in a web server and subdomains. CyberArk found that 2 of these subdomains can be hijacked and stolen. They then created the Evil GIF (which was a Donald Duck GIF, by the way) and coded it that way which when viewed, would automatically make the user give up the token to store it in one of the 2 subdomains.

Whatever you do now, don't worry. This GIF is gone!

NOW HIRING: REPORTERS

We are still looking for reporters.

Vintro's is on the lookout for more reporters. The reporters should not worry too much about spelling, since the editors will fix it.
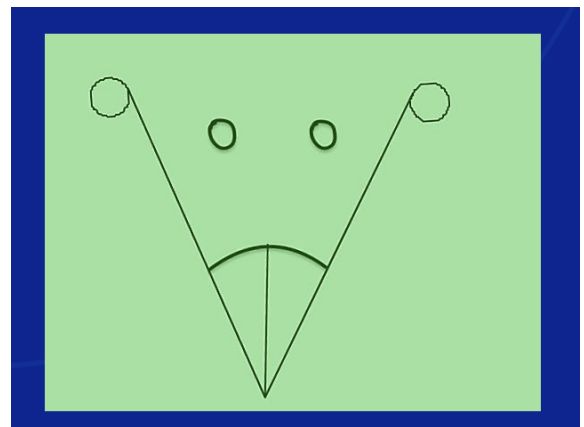

Reporters should be able to have some ability to spell or type. Preferably, the articles should be done online. Reporters are asked but not required to include a picture, maximum 2.

Before being hired, reporters will take an interview.

Here is the place you should email to be hired:

vintro@vintros.net

Thank you for your attention.

POLLUTION MEETS COVID-19

Coronavirus detected on air pollution particles

Coronavirus

Pollution just got worse. There have been particles of COVID-19 located on air pollution particles, like dust.

This could happen when people sneeze or cough. When they sneeze, many many little water droplets fly out of their mouth. These could contain bacteria or germs, and not only for Coronavirus! For all contagious diseases, this happens too! Social distancing might not help us now, so we might need to do a whole lockdown!

It is very important to wear a dust mask now, since it purifies air of bacteria and dust and bacterial dust! /

So stay home, and stay safe! Run air filters if you have them, or wear dust masks, or both!
